Procurement and Supply Chain Management for Medical Devices, Diagnostics and Equipments (MDDE)

Duration: 2 months online course

Course fees: USD 400 (exclusive of taxes and bank charges)

Special price for group enrollments

This course is for health professionals in public health programs (development partners, government, NGOs, civil society, academia) and people interested to know how to successfully manage all types of health products in procurement and supply chain.

Course Overview

This course informs about the special requirements of medical diagnostics, devices and equipments. It compares the key differences between the requirements of the clinical diagnostics/laboratory supply chain and the pharmaceuticals and health commodities supply chain. The course highlights the scale of operations in terms of number of products and the resulting requirement for a fundamentally different approach to procurement management and to managing a supply chain for very short shelf life products.

Course Contents

- Introduction to PSM of MDDE public health concepts and essential medical devices
- Procurement and supply chain management for MDDE: what is proven to work
- New health technologies
- Device selection and health technology assessments
